**CODE
BAITHAK**

BY NAMAN BHAIYA

Recap (Previous Lecture Connection):

Type Promotion in Expression

* byte, short, char $\longrightarrow$ promoted to int

* Result of Expression = Largest data type in
Type Expression

$2 + 1.0 \longrightarrow 3.0$

$5 / 2 \longrightarrow 2$

$5 / 2.0 \longrightarrow 2.5$

* Internal Typecasting takes place in the following :

$+=$, $-=$, $*=$, $/=$, $\%=$, $++$, $--$

7. $\text{char ch} = 'a'$

$\text{cout}(\text{ch}+1) \longrightarrow \underline{\underline{98}}$

$\text{ch}++$

$\text{cout}(\text{ch}) \longrightarrow \underline{\underline{'b'}}$

$\text{ch}+1 = 'a'+1$
 $\downarrow$
 $= 97+1$
 $= \textcircled{98}$

$\text{byte a} = 10;$

$\text{a}++$
 $\downarrow$

$\text{a} += 1$

$\text{a} = (\text{byte})(\text{a}+1)$

char $\text{ch} = 'a'$

$\text{ch}++ \longrightarrow \text{ch} += 1 \longrightarrow$

$\text{ch} = (\text{char})(\text{ch}+1)$
 $(\text{char})(98)$

What is Overflow ?

- * Value exceeds the allowed range of a data type
- * Cyclic wrap around occurs

Ex: byte

-128 to 127

(Range)
